

#Jenny

Finally I get this ebook, thanks for all these I can get now!

#Rio

Cool! I'am really happy

#Markus Jensen

I did not think that this would work, my best friend showed me this website, and it does! I get my most wanted eBook

#Hun Tsu

wtf this great ebook for free?!

#Che Salsa

My friends are so mad that they do not know how I have all the high quality ebook which they do not!

#Diego Butler

so many fake sites. this is the first one which worked! Many thanks

Q-4. Construct a quadrilateral in the Cartesian plane with vertices  $M(2, 5)$ ,  $N(6, 6)$ ,  $O(4, -4)$  and  $P(-3, -1)$ . Also, find the area of the quadrilateral.

Solution:

Let  $MNPQ$  be the given quadrilateral having vertices  $M(2, 5)$ ,  $N(6, 6)$ ,  $O(4, -4)$  and  $P(-3, -1)$ .

Note: Join  $M$ ,  $N$ ,  $O$  and  $P$  on the Cartesian plane and join  $MO$ ,  $NO$ ,  $OP$  and  $PM$ .

The quadrilateral, thus, formed will be

As we need to find the area of the quadrilateral  $MNPQ$ , so draw a diagonal, say,  $MO$ .

Note:

Area of  $MNPQ$  = area of  $\triangle MNO$  + area of  $\triangle MOP$

Area of a triangle with vertices  $(x_1, y_1)$ ,  $(x_2, y_2)$ ,  $(x_3, y_3)$  and  $(x_4, y_4)$  is given by:

$$\frac{1}{2} |(x_1(y_2 - y_3) + x_2(y_3 - y_4) + x_3(y_4 - y_2))|$$

Note:

Vertices of  $\triangle MNO$  are  $M(2, 5)$ ,  $N(6, 6)$  and  $O(4, -4)$ .

$$\text{Area of } \triangle MNO = \frac{1}{2} |[-2(-6 - (-4)) + 6(-4 - 5)] + 4(5 - (-6))|$$

$$= \frac{1}{2} |[-2(-6 + 4) + 6(-8 - 5)] + 4(5 + 6)|$$

$$= \frac{1}{2} |[-2(-2) + 6(-13)] + 4(11)|$$

$$= \frac{1}{2} |4 - 78 + 44|$$

$$= \frac{1}{2} |24|$$

$$= 12 \text{ unit}^2$$

Vertices of  $\triangle MOP$  are  $M(2, 5)$ ,  $O(4, -4)$  and  $P(-3, -1)$ .

$$\text{Area of } \triangle MOP = \frac{1}{2} |[-2(-4 - (-1)) + 4(-1 - (-1))] + (-3)(5 - (-4))|$$

$$= \frac{1}{2} |[-2(-4 + 1) + 4(-1 - 1)] - 3(5 + 4)|$$

$$= \frac{1}{2} |[-2(-3) - 8] - 21|$$

$$= \frac{1}{2} |6 - 24 - 21|$$

$$= \frac{1}{2} |45|$$

$$= 22.5$$
