

## #Jenny

Finally I get this ebook, thanks for all these I can get now!

## #Rio

Cool! I'am really happy

## #Markus Jensen

I did not think that this would work, my best friend showed me this website, and it does! I get my most wanted eBook

## #Hun Tsu

wtf this great ebook for free?!

## #Che Salsa

My friends are so mad that they do not know how I have all the high quality ebook which they do not!

## #Diego Butler

so many fake sites. this is the first one which worked! Many thanks

**Nissan Micra User Manual**

front seats or near the side roof rails. Do not allow anyone sitting in the front seats or rear outboard seats to extend their hands out of the windows or lean against the doors. Some examples of dangerous riding positions are shown in the illustrations.

- When sitting in the rear seats, do not hold onto the back of the front seats. If the supplemental side-impact air bag and supplemental curtain side-impact air bags deploy, you may be seriously injured. Be especially careful with children, who should always be properly restrained.
- Do not use seat covers on the front seatsback. They may interfere with the supplemental side-impact air bag inflators.

**Pre-tensioner seat belt system (where fitted)**

The pre-tensioner seat belt system may activate with the supplemental air bag system in certain types of collisions.

Working with the seat belt retractor and anchor, helps tighten the seat belt the instant the vehicle becomes involved in certain types of collisions, helping to reduce front seat occupants' risk. (See "Pre-tensioner seat belt system (where fitted)" later in this section.)

**Air bag warning label**

**SRS air bag**

The warning label (1) is located on the surface of the passenger's seat area.

**SRS front-impact passenger air bag (where fitted)**

The warning label (2) (where fitted) is located on the side of the passenger's side instrument panel.

This label warns you not to fit a rear-facing child restraint system on the front passenger seat as such a restraint system could be in the position which causes serious injury to the infant in case of air bag deployment during a collision.

In vehicles equipped with a front-impact passenger air bag system, use a rear-facing child restraint system only if the manufacturer's instructions specify that you can use a rear-facing child restraint on a seat protected by an air bag in front of it.

When installing a child restraint system in your vehicle, always follow the child restraint system manufacturer's instructions for installation. For additional information, see "Child restraints" earlier in this section.

**SRS air bag warning light**

The SRS air bag warning light, displaying (3) in the instrument panel, monitors the circuits of the supplemental front-impact air bag, supplemental side-impact air bags and pre-tensioner seat belt systems. The circuits monitored by the SRS air bag warning light are the diagnosis sensor unit, cockpit area sensor, unladen sensor, front impact air bag module, side-impact air bag module, supplemental curtain side-impact air bag module, pre-tensioner seat belts and all-related wiring.

When the ignition switch is in the "ON" or "START" position, the SRS air bag warning light illuminates for about 7 seconds and then turns off. This indicates that the SRS air bag systems are operational.

Safety – seats, seat belts and supplemental restraint system 1-27
