#Jenny

Finally I get this ebook, thanks for all these I can get now!

#Rio

Cool! I'am really happy

#Markus Jensen

I did not think that this would work, my best friend showed me this website, and it does! I get my most wanted eBook

#Hun Tsu

wtf this great ebook for free?!

#Che Salsa

My friends are so mad that they do not know how I have all the high quality ebook which they do not!

#Diego Butler

so many fake sites. this is the first one which worked! Many thanks

Basic Life Support Pretest

1. While at work in a hospital you find an adult victim who has collapsed. No one is available to help. After you ensure that the scene is safe, what should you do next?
 - a. Check for unresponsiveness. If the victim is unresponsive, activate the emergency response system (or phone 911) and get the AED if available
 - b. Phone 911 (or activate the emergency response system), then wait outside to direct the emergency responders
 - c. Open the airway with a tongue-jaw lift and perform 2 finger sweeps to check if food is blocking the airway
 - d. Perform CPR for 1 minute, then phone 911
2. You work with an overweight 55-year-old dentist with no known history of heart disease. He begins to complain of sudden, severe, "crushing" pain under his breastbone, in the center of his chest. The pain has lasted more than 5 minutes. What problem should you think of right away, and what should you do?
 - a. Heartburn; tell him to take an antacid
 - b. Angina; phone his personal physician
 - c. Heart attack; phone 911
 - d. Arrhythmia; drive him to an Emergency Department
3. You witnessed the collapse of a 45-year-old man. You are now performing CPR after sending someone to phone 911. You have done your best to ensure that the first 2 links in the Chain of Survival have been completed immediately. What is the third link in the chain, which will have the greatest effect on increasing this man's chance of survival?
 - a. Arrival of paramedics who will administer drugs
 - b. Transportation of the man to a hospital
 - c. Arrival of a rescuer with a defibrillator
 - d. Arrival of EMS personnel who can do CPR
4. You have been talking with a 60-year-old man. He is alert and has been conversing normally. All at once he complains of a sudden weakness on one side of his face and in one arm. He is also having trouble speaking. What is the most likely cause of his problem?
 - a. A seizure
 - b. A heart attack
 - c. A stroke
 - d. Diabetic coma
